Music Player App

1. Introduction

This project is a prototype of a mobile music player application created using Azure RP. The prototype consists of three main pages: Login Page, Song List Page, Music Player Page. The goal is to design a clear, user-friendly interface for accessing and playing music.

2. Prototype Pages

2.1 Login Page

- Purpose: Provide secure access to the app.

- Features: Input fields (Name, Password), Buttons (Register, Login), Link (Password Reset).

- Design Notes: Background with musical theme, translucent box for login elements, bright yellow buttons.

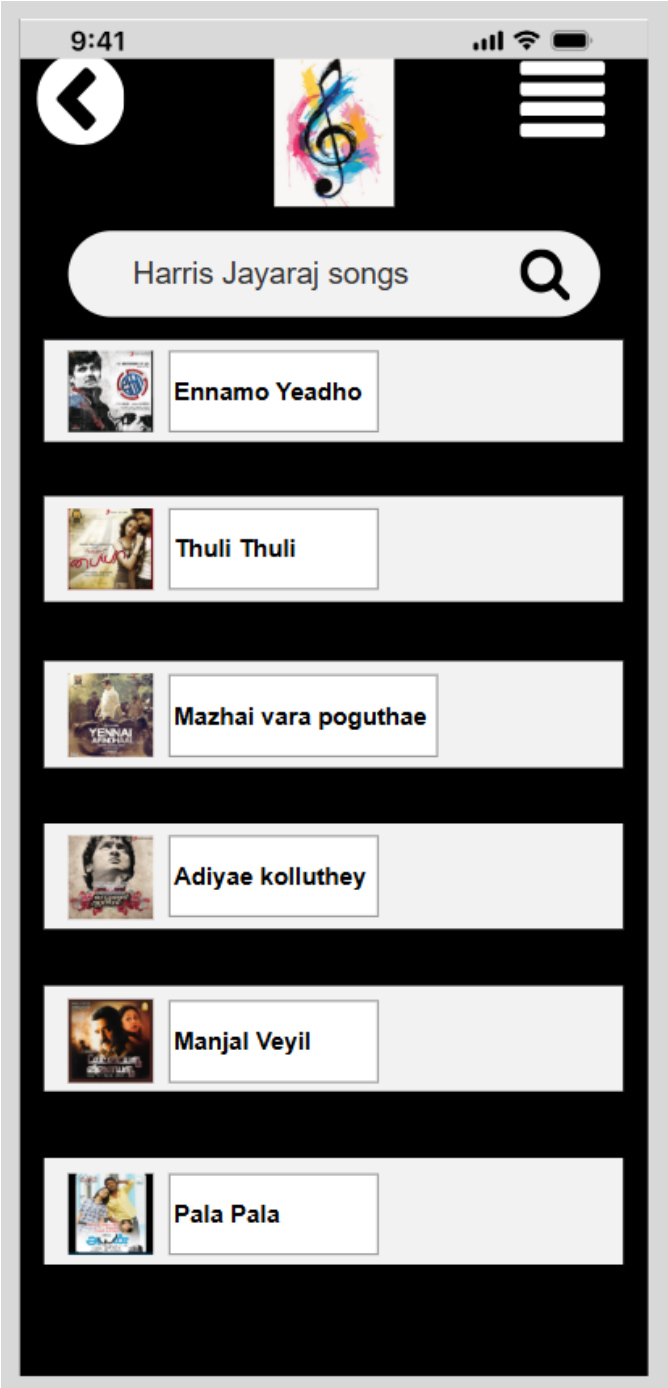
2.2 Song List Page

- Purpose: Display available songs for browsing and selection.

- Features: Search bar, list of songs with album cover images and titles, back arrow and menu icon.

- Design Notes: Clean layout focused on artist, scrollable list, distinct song items with cover art.



2.3 Music Player Page

- Purpose: Play and control selected music track.

- Features: Album cover display, song details (Title, Artist, Album, Duration, Plays), playback controls (Repeat, Previous, Play/Pause, Next, Favorite), progress bar.

- Design Notes: Modern interface with clear icons, 'Now Playing' header, home and settings icons.

1. Current Status

- The prototype has been created with three functional pages.

- This version is before user review.

- Next step: Collect feedback from users and refine the design accordingly.

4. User Review & Changes

- **Initial Prototype:** Three pages created in Azure RP.
- **User Feedback:** Example suggestions – add shuffle button, increase font size, change background color.
- **Refinements:** Updated prototype based on feedback, demonstrating iterative improvement.

5. Changes Made After Review

5.1 Login Page

- Before: Dark translucent box with login fields, yellow buttons, and plain header.

- After: Added a colored banner at the top with the app title ("Music app") for clearer branding. Background design made more vibrant with colorful treble clef and paint strokes. Buttons kept yellow but aligned more neatly for better visibility.

- Impact: The page now looks more professional and engaging, making the app identity stronger.

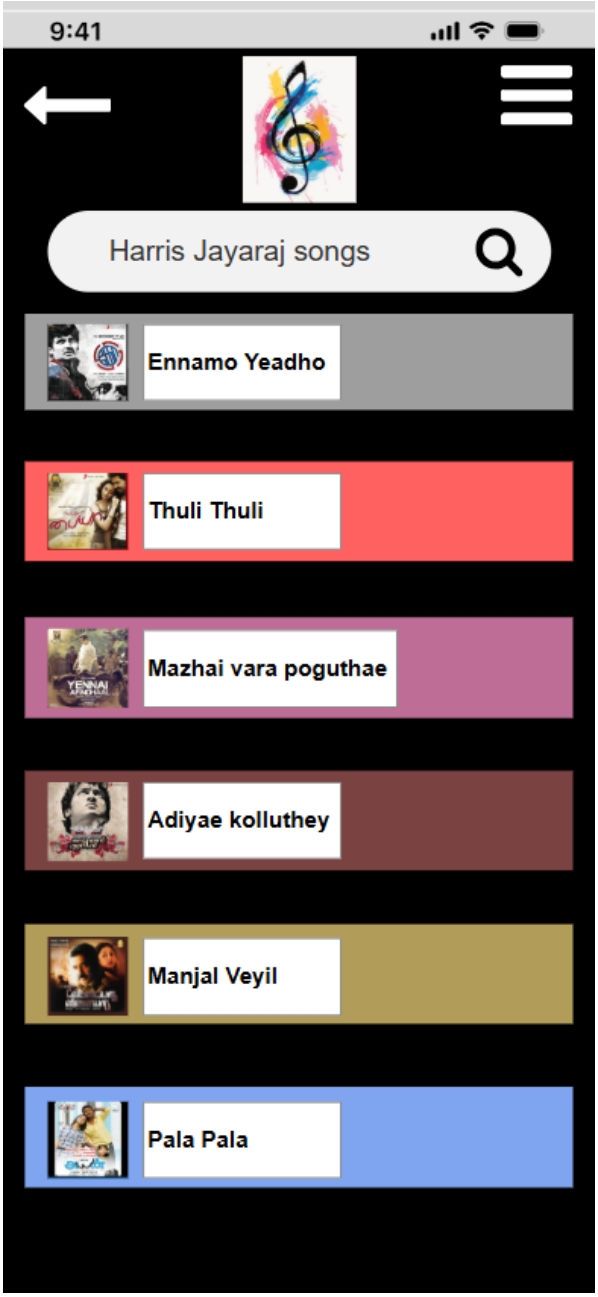
5.2 Song List Page

- Before: Black background, simple list of songs with album covers.

- After: Each song entry placed inside colored rectangular bars, making the list visually distinct. Improved readability by separating songs with clear blocks. Search bar retained but styled more prominently.

- Impact: Easier navigation and more attractive layout, reducing user confusion when browsing songs.

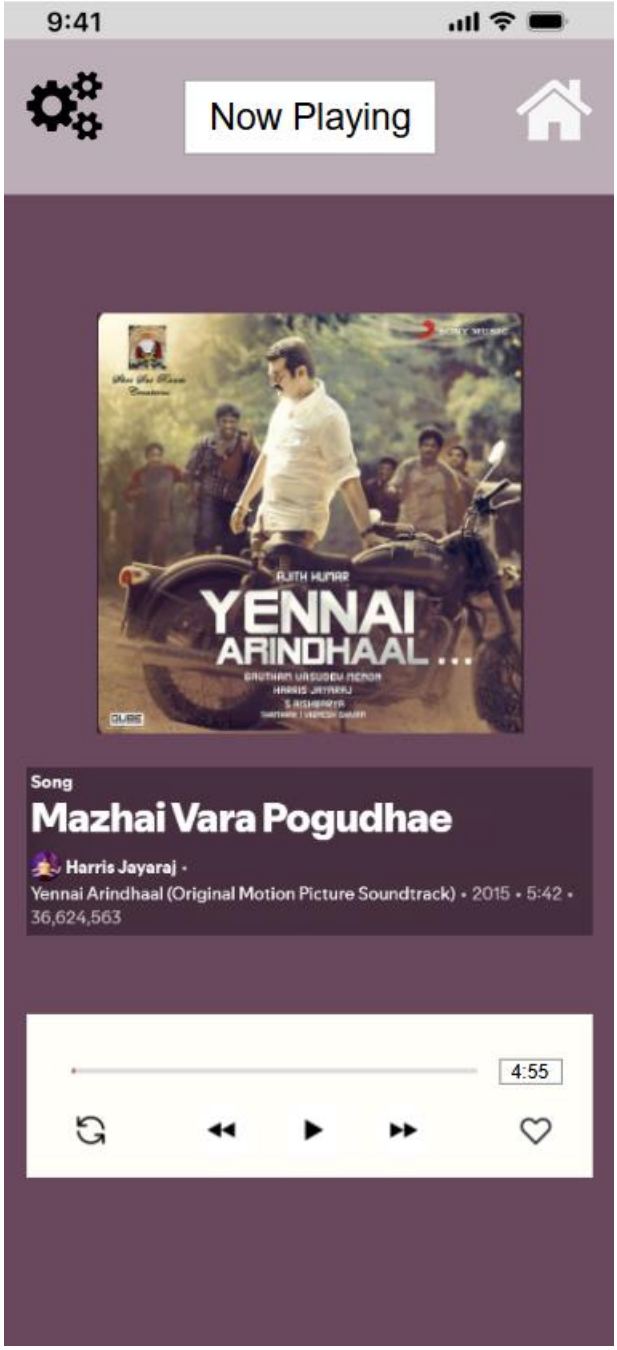


5.3 Music Player Page

- Before: Basic layout with album cover, song details, and playback controls.

- After: Header redesigned with gear icon (settings) and home icon for quick navigation. Album cover and song details displayed more cleanly, with emphasis on artist and track info. Playback bar simplified with clear icons (previous, play/pause, next, heart). Progress bar remains but aligned better for clarity.

- Impact: More intuitive controls and polished design, improving the listening experience.



6. Conclusion

The prototype was refined based on user review feedback. Changes focused on visual clarity, branding, and usability. The updated version is more professional, user-friendly, and ready for further testing or submission.
